the Pill receptor and the Fr Espino of 195. The specification calata
to smallted chimaric polyapida with improved pharmacolitatics. The
modified chimaric polyapida with proved pharmacolitatics. The
modified chimaric polyapida was preferably statistic proper of 112 prefit
control of 1950 and 195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    neuroleptic renal active; antidiabetic; neuroactive; neuroprotectant; demetia; epitepsy; schizophrenia; pripheral nerve injury; diabetic neuropathy; fusion protein.
                                                                                                                                                                                                                                                                                                                        Nucleic acid molecule encoding mammalian phospholipid transfer protein.
                                                                                                                                                                                                                                                                                                                                                  and its fragments, useful for diagnosis, evaluation, and treatment of
diseases associated with the gene expression and for producing model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         146 NCTARTELNVGI-DENWEYPSSKHOHKKLVNRDLKTQSGSEMKKFLST----LTIDGVTR 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and disd chinearic polypopides are preferably Fit teceptor polypopides. That have been modified to improve their pharmacokinetic profile. The polypopides con be used to derroase or inhibit plasma leakage and/or vascular perseability in a mammal.
                                                                                                                                                                                                                      Nucleic acid molecule encoding mammallan phospholipid transfer protein, and its fragments, useful for diagnosis, evaluation, and treatment of diseases associated with the one expression and for producing model.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a fusion protein of the invention between
the Pill receptor and the Pr cepton of igg. The specification relates
to modified chimeric polypoptides with improved pharmacokinetics. The
